

Configuring iSupport Mobile Layouts and Settings

You can access iSupport via a tablet, smart phone (iPhone or Android), or WAP (Wireless Application Protocol) phone for in-the-field updates to iSupport data, inside or outside the firewall, with interfaces optimized for your device.

- You can use a smart phone, WAP phone, or tablet to access iSupport **outside** the firewall via the iSupport Mobile Desktop URL (<http://<server>/Mobile/> by default).
 - **If using a smart phone (iOS, Android, or Blackberry) or tablet**, you can use an HTML5 interface that includes mobile-enabled Incident views, incident creation and update functionality, and a Check In feature for tracking via the Rep Map  component. Note that Windows phones are not yet supported.
 - **If using a WAP-enabled phone**, you can create, edit, and view Incident, Change, Customer Profile, and Company records using a simple web interface.
- You can use a smart phone or tablet to access iSupport **inside** the firewall using an HTML5 interface via the iSupport application URL (<http://<server>/Rep/> by default).

If using a tablet, you have the option of using rich tablet-optimized screens for creating and updating work items.

To configure mobile settings for support representatives, follow the steps in the next section to configure access and then see [“Configuring the Layout for the Rep HTML5 Interface” on page 2](#) to configure the layout if using a smart phone or tablet. See [“Accessing the mySupport Portal on a Mobile Device” on page 7](#) for information on configuring the mySupport portal on a mobile device and mobile detection settings.

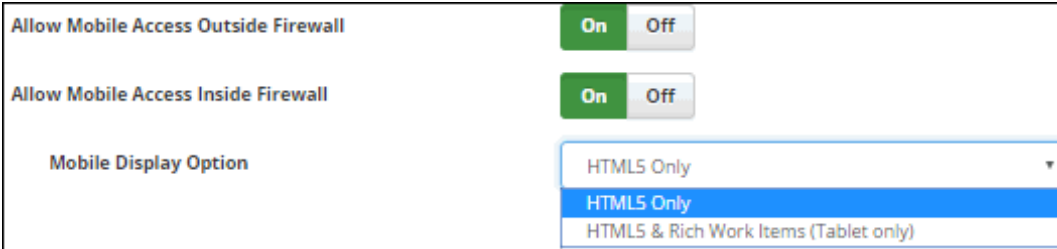

Note that layouts configured via the Layout screen in each module **will not** apply to smart phones; only layouts configured via the Mobile Layouts and Settings screen will apply to the HTML5 interface.

Note that location services must be enabled on the device and on the browser for the Rep Map Check In feature.

Configuring Mobile Access for Support Representatives

To configure access to iSupport via a mobile device:

- 1 If accessing iSupport outside the firewall, do the following; if accessing iSupport inside the firewall, go to step 2.
 - a Ensure that the Mobile Desktop is installed via the iSupport setup.exe file. The default installation is location is: [Program Files]\iSupport\MobileRepClient. The utility creates an IIS virtual directory pointing to [Program Files]\iSupport\MobileRepClient with the name specified by the administrator.
 - b Enter the Mobile Desktop URL in the Core Settings | Global Settings screen.
- 2 Enable mobile access and display options for individual support representatives via the Core Settings | Support Representatives | Profile screen. If accessing iSupport inside the firewall, it must be done via a smart phone or tablet. You can enable a rich work item interface in addition to the HTML5 interface if using a tablet.

Allow Mobile Access Outside Firewall	On	Off
Allow Mobile Access Inside Firewall	On	Off
Mobile Display Option	HTML5 Only HTML5 Only HTML5 & Rich Work Items (Tablet only)	

- 3 If accessing iSupport via a smart phone or tablet, do the following:
 - a Configure the layout for the HTML5 interface. See the next section.

- b To enable a view to display on the HTML5 interface, open the view in the View Designer and select Yes in the Enabled for Mobile field.

Configuring the Layout for the Rep HTML5 Interface

Use the Options and Tools | Customize | Layouts | Mobile Layouts and Settings screen to configure the fields that will appear when support representatives access iSupport via a smart phone or tablet:

- The fields on a Feed screen appear when the Search feature is accessed and when results display
- The fields on a Detail screen appear when:
 - A work item (incident, problem, change, knowledge entry, or asset) is viewed or created, and
 - A customer, company, or support representative Profile record is viewed.

Preview

Click to switch to the Details view for entry fields

Use the Preview field to switch the picture

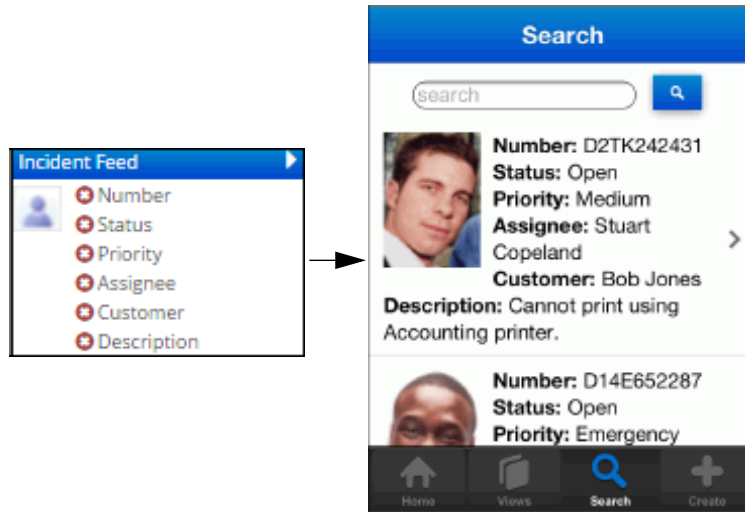

To design a feed or detail layout, drag an available field to the Layout Designer. You can drag a field vertically to reorder fields in the Layout Designer. Click the Details View  icon to switch from a feed layout to a details layout.

Select Yes in the **Display Avatars** field if you wish to include the customer's avatar when you display customer information (by clicking Search in the Home screen, the  icon in the Incident Detail screen, and the Details  icon in the Incident detail screen).

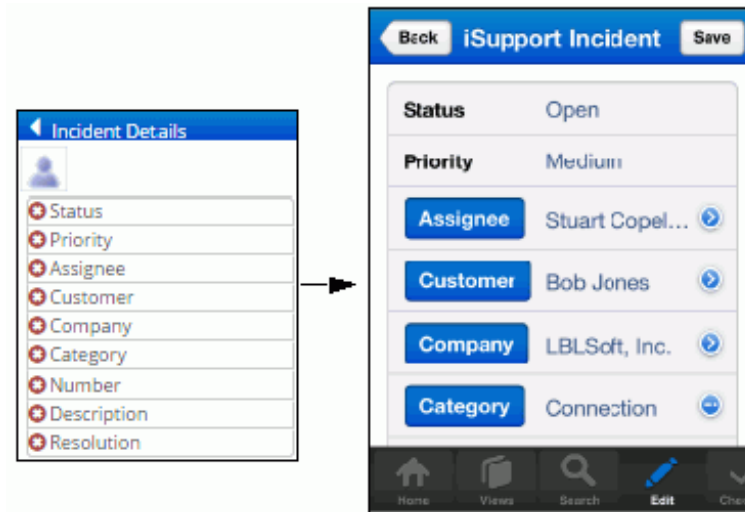

Select Yes in the **Check In on Login** field to automatically check in the user for tracking via the Rep Map  dashboard component on the Desktop (location services must be enabled on the device). This feature displays the last known GPS location of any user logged into the mobile application.

Incident Layouts

The Incident Feed layout determines the content that appears when you click Search on the Home screen or icon bar at the bottom of the screen.

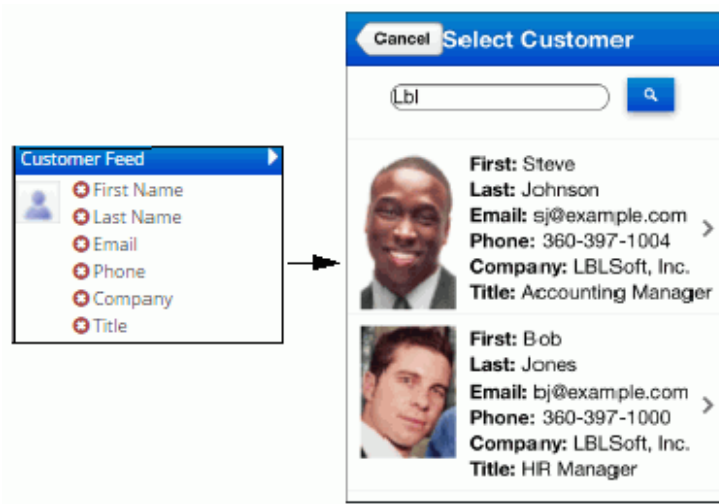

The Incident Details layout determines the content that appears when you create or view an incident.

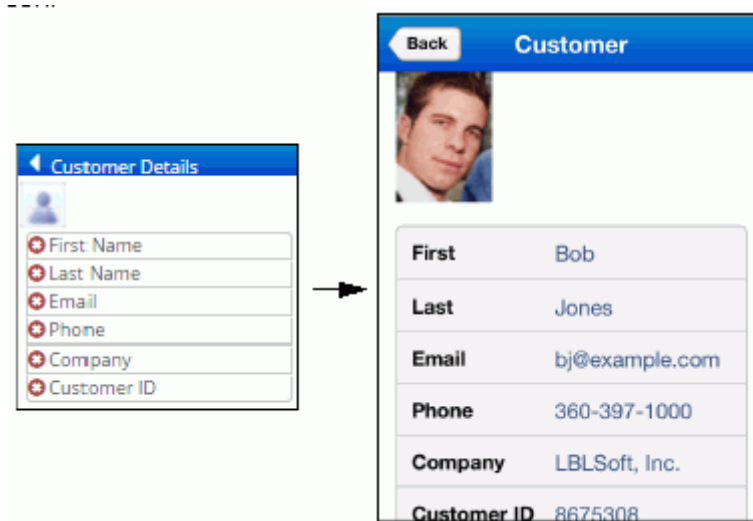

Customer Layouts

The Customer Feed layout determines the content that appears when you click the **Customer** icon in the Incident Detail screen.

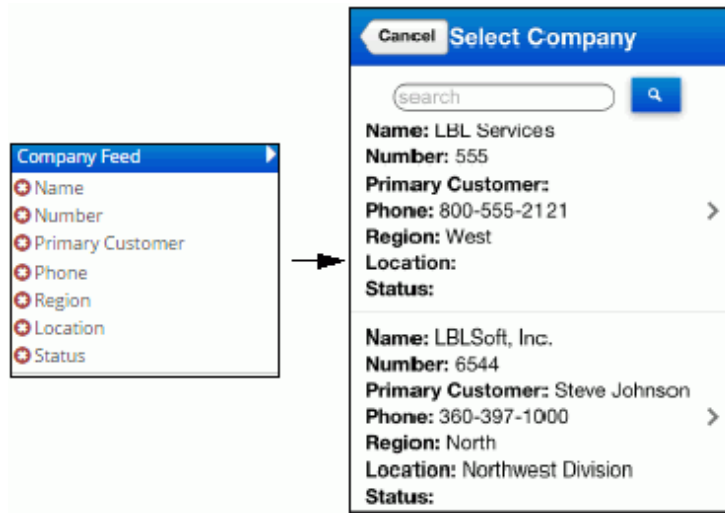

The Customer Details layout determines the content that appears when you click the Details icon in the Customer field in the Incident details screen.

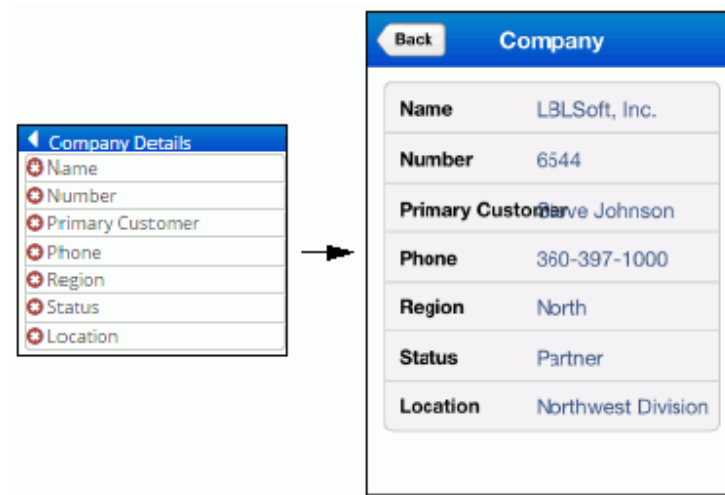

Company Layouts

The Company Feed layout applies if you have added the Company field to the Incident detail screen and the customer is associated with multiple companies. The **Company** button will appear in the Company field in the Incident details screen; the Company Feed layout determines the content that appears when you click that button.

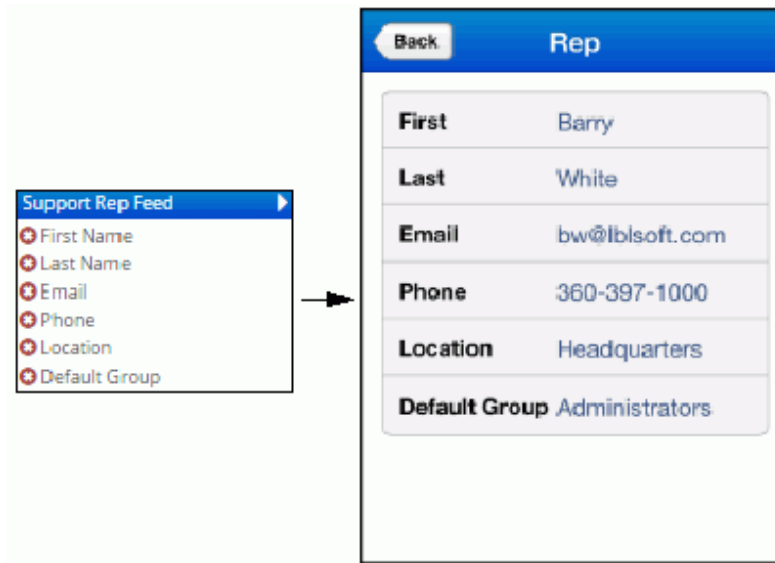

The Company Details layout determines the content that appears when you click the Details icon in the Company field in the Incident details screen.

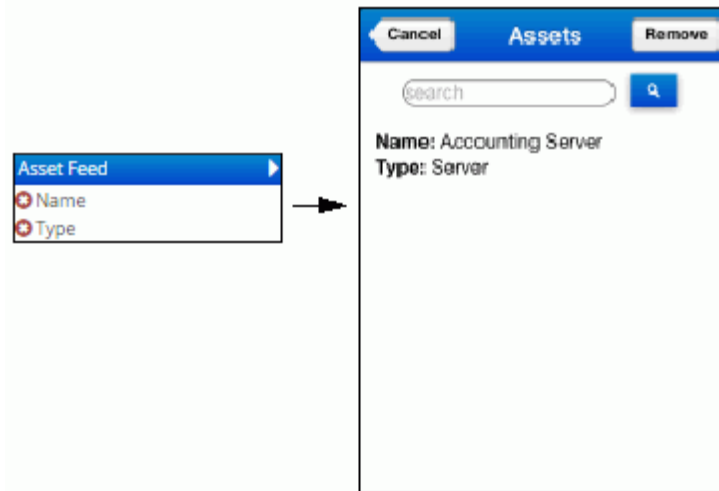

Support Rep Layout

The Support Rep Details layout determines the content that appears when you click the Details  icon in the Assignee field in the Incident details screen.

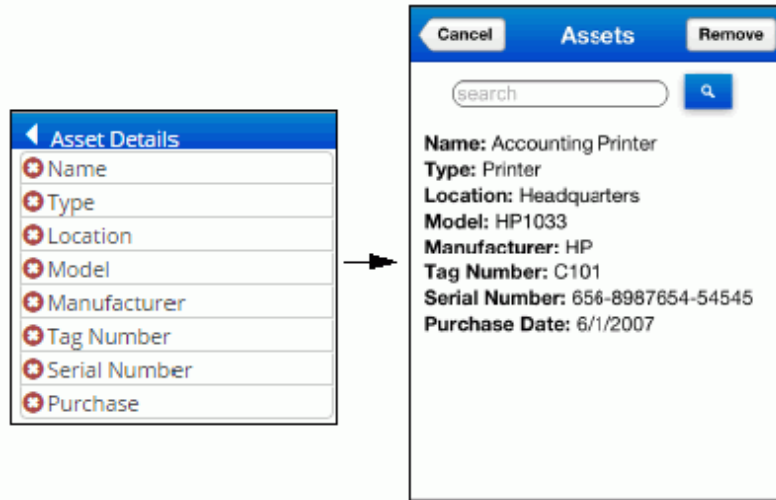

Asset Layouts

The Asset Feed layout determines the content that appears if you have added the Asset field to a work item detail screen to display the  icon and an asset is selected.

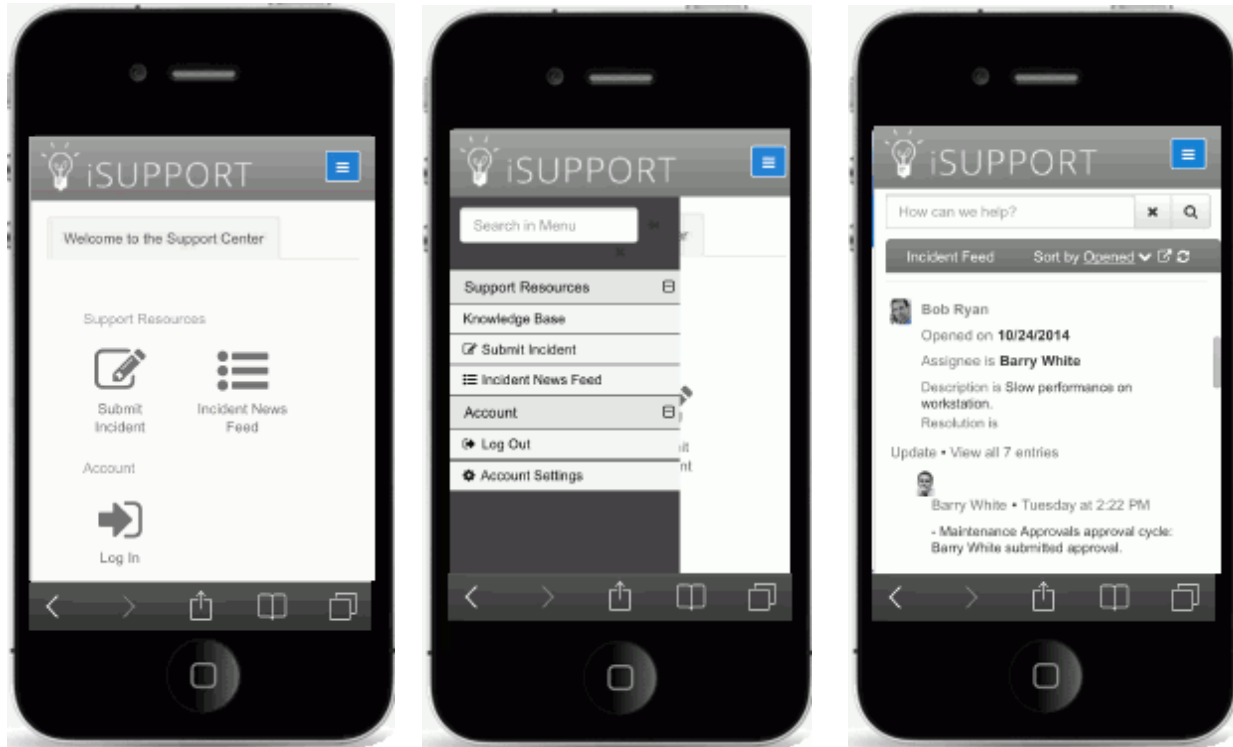

The Asset Details layout determines the content that appears when you create or view an Asset record, or if you have added the Asset field to the Incident detail screen and you click the Details  icon in the Asset field.

Accessing the mySupport Portal on a Mobile Device

The mySupport portal can be accessed via a mobile device; you can create a mySupport Options set for mobile devices and assign it to a customer, company, or customer group. You can also create different display and submit layouts for work item functionality on a set of mySupport portal options via the mySupport Layout links included for each module (incident, knowledge, problem, change, purchase, and service contract).

Use the Default Mobile mySupport Options field in the mySupport Portals configuration screen to select the options to appear when this mySupport URL is accessed by a smart phone (iOS, Android, or Blackberry) or tablet if a customer has not logged in or if none are assigned to the customer's profile, customer's primary company profile, or primary group profile.

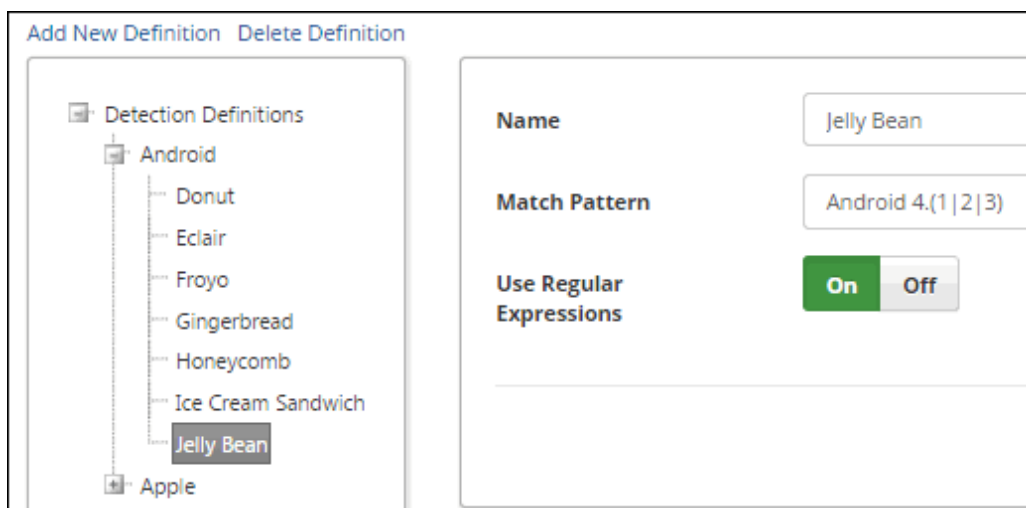

Configuring Easy Submit Functionality

Use iSupport's Easy Submit functionality to enable customers to use an older version of a device that cannot render HTML5 to submit incidents. The interface contains a Description field and fields required for authentication.

The screenshot shows a mobile application interface for submitting an issue. At the top, the status bar shows 'Verizon', '8:40 AM', and '83%' battery. The app header features a lightbulb icon, the text 'iSUPPORT', and a menu icon. Below the header is a dark grey bar with the text 'Submit your issue'. The main form area contains several input fields: 'First Name', 'Last Name', 'Email', 'Company', 'Location', 'Phone', and 'Description'. Each field has a small exclamation mark icon to its right. At the bottom of the form is a 'Submit' button.

iSupport's Easy Submit functionality utilizes the browser's user agent string, which identifies the browser version and other device details. Definitions in the Easy Submit Device Settings screen identify the user agent string for the device(s) to detect.

The screenshot shows a web interface for configuring device definitions. On the left, there is a tree view titled 'Detection Definitions' with a plus icon. It lists 'Android' and 'Apple'. Under 'Android', there is a list of versions: Donut, Eclair, Froyo, Gingerbread, Honeycomb, Ice Cream Sandwich, and Jelly Bean. 'Jelly Bean' is highlighted with a grey box. On the right, there is a form for editing a definition. It has a 'Name' field with the value 'Jelly Bean', a 'Match Pattern' field with the value 'Android 4,(1|2|3)', and a 'Use Regular Expressions' toggle switch set to 'On'.

Definitions for some common device/browser user agent strings are included by default; see <http://user-agent-string.info/list-of-ua> for a list of user agent strings for other device browsers. These definitions will be available for selection in the mySupport Portal screen so you can target the devices for display of the Easy Submit interface.

Match Pattern - enter the portions of the user agent string to be searched for a match; you can use expression language with syntax such as parenthesis () to group parameters, a pipe (|) for an OR condition, or brackets [] for a character match.

Use Regular Expressions - select On to evaluate the conditions in the Match Pattern and display the Easy Submit interface if the conditions are true. In the example above, the Easy Submit interface will display for an Android version 4.1, 4.2, or 4.3.
